Projects

Adaptive Facial Recognition System for Real Time Attendance Monitoring | *Python, SVM* **Dec 2025**

- Implemented an end-to-end face recognition pipeline using HOG feature extraction and RBF-kernel SVM, achieving 92% test accuracy while maintaining fast, GPU-free real-time inference.
- Improved robustness to lighting and image quality variations by integrating CLAHE normalization, adaptive face cropping, and outlier removal, reducing noisy samples by 4% and stabilizing model performance.
- Designed a unified, reproducible scikit-learn pipeline with feature scaling and ROC-optimized class thresholds, enabling reliable identity verification, high recall, and consistent deployment behaviour.
- **Repository Link:** https://github.com/Abhishek0ss/Supervised_Face_Recognition_System

Genetic Disorder Prediction Using SVM | *Python, SVM, Tkinter, NumPy, Pandas* **Apr 2025**

- Developed an SVM-based image-driven genetic disorder prediction model, reaching around 92% accuracy through optimized preprocessing and feature extraction.
- Enhanced dataset balance using SMOTE, cutting prediction bias toward majority classes by 40% and improving minority-class recall by 25%.
- Built a user-friendly GUI enabling real-time predictions in under 2 seconds per image, clearly communicated prediction results through visual feedback enabling non-technical users to interpret outputs.

Training

C++ Programming: OOPs and DSA | *Certificate Link* **Jun 2025 - Jul 2025**

- Completed hands-on training in C++ programming, covering core syntax, pointers, memory management, and STL concepts with a strong focus on writing clean and readable code.
- Applied key OOP principles such as classes, inheritance, polymorphism, and abstraction through structured exercises and mini tasks explaining design choices during practice sessions.
- Strengthened understanding of Data Structures & Algorithms by implementing arrays, linked lists, stacks, queues, trees, and sorting/searching techniques with time-complexity analysis.

Certificates / Certifications

Essentials Automation Professional **Dec 2025**
Automation Anywhere — Certificate Link

Oracle Database and AWS Architect professional **Oct 2025**
Oracle — Certificate Link

Python **Nov 2025**
Hacker Rank — Certificate Link

Skills

Languages: Python, Java, C++, C

Technologies/Frameworks: Git, GitHub, Scikit-learn, PyTorch, Flask, HTML, CSS, Hugging Face

Domain Skills: Machine Learning, Model Development, Feature Engineering, Hyperparameter Tunning

Education

Lovely Professional University **2023 – 2027**
Bachelor of Technology - Computer Science and Engineering — CGPA: 7.61 *Phagwara, Punjab*

Govt Boys Higher Secondary **2020 – 2022**
12th — Percentage: 90% *Attingal, Trivandrum*

Govt Vocational Higher Secondary **2019 – 2020**
10th — Percentage: 96% *Attingal, Trivandrum*
